FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

The United States exported an estimated record \$6.1 billion of agricultural commodities in fiscal year 1963-64, 20 percent more than in the previous year. Principal increases occurred in wheat and flour, cotton, feed grains, soybeans, rice, tobacco, tallow, lard, dairy products, poultry products, and meat. Small declines took place for fruits, vegetables, and vegetable oils. Practically all of the \$1 billion increase in agricultural exports occurred in sales for dollars. Exports were stimulated by a number of factors, including market development efforts abroad, the unfavorable wheat harvests in the Soviet Union and Western Europe, continuing rapid development of livestock industries in Western Europe and Japan, a change in the CCC cotton program that permitted sales at competitive prices from CCC stocks, and generally heightened economic activity in Western Europe and Japan. Dollar exports hit a record of nearly \$4.6 billion, three-fourths of the export total, while Food-for-Peace exports totaled around \$1.5 billion.

* * * * *

U.S. agricultural exports to the European Economic Community advanced to \$1,173 million in the July-April period of 1963-64 from \$904 million a year earlier. There were larger shipments both of commodities subject to the variable import levies and those not subject to the levies. Variable levy commodities rose to \$367 million from \$306 million, reflecting a sharp rise in wheat, with smaller gains for feed grains, pork, and turkey meat. Variable levies continued to reduce shipments of wheat flour, broilers, and fryers. Commodities not subject to the variable levies totaled \$806 million this July-April compared with \$598 million a year earlier, with cotton alone accounting for nearly half of the total gain, followed by soybeans, tallow, tobacco, variety meats, and vegetable oils. Declines were noted only in shipments of fruits and vegetables.

* * * * *

Exports under Government programs in calendar year 1963 totaled \$1,621 million. Over half of the shipments under programs, \$850 million, went to Asia, principally to India. Europe and Africa received approximately the same amounts, \$285 million and \$292 million, respectively. Four-fifths of program shipments to

Europe were destined for Yugoslavia, Turkey, and Poland. Principal African destinations were the United Arab Republic (Egypt), Algeria, Morocco, Republic of the Congo, and Tunisia. Program shipments to Latin America totaled \$178 million, about half consisting principally of sales to Brazil for foreign currency under Title I, P.L. 480. Oceania accounted for \$0.2 million. Dollar sales totaled a record \$3,964 million in 1963, up \$445 million from a year earlier. Shipments by area were as follows: Europe, over \$2 billion; Asia, \$900 million; Canada, \$596 million; Latin America, \$322 million; Africa, \$59 million; and Oceania, \$44 million.

* * * * *

U.S. agricultural imports for consumption rose to \$3,452 million in the July-April period of fiscal year 1963-64, 5 percent more than a year earlier. Over three-fourths of the increase represented larger imports of complementary (noncompetitive) items, reflecting mainly higher prices for a number of commodities such as coffee, carpet wool, and cocoa beans. A 9-percent rise in imports of complementary products stemmed from larger imports of coffee, bananas, and carpet wool. Supplementary (partially competitive) commodities were up 2 percent as increases in fruits, barley, hides and skins, vegetables, cane sugar, and meats and meat products were about offset by declines in dutiable cattle, apparel wool, and oilseeds and products. Imports of meats and meat products have been below year-earlier levels since January 1964.

SPECIAL in this issue

U.S. AGRICULTURAL EXPORTS REACHED ALLTIME HIGH OF \$6.1 BILLION
= IN FISCAL YEAR 1963-64

by

Robert L. Tontz and Dewain H. Rahe ^{1/}

U.S. agricultural exports are estimated at a record \$6,115 million in fiscal year 1963-64, up 20 percent from the \$5,078 million for the previous fiscal year (table 1). The figure for 1963-64 includes actual exports of \$5,616 million for July-May and an estimate of \$499 million for June. Principal increases occurred in wheat and flour, cotton, feed grains, soybeans, rice, tobacco, tallow, lard, dairy products, poultry products, and meat. Small declines took place for fruits, vegetables, and vegetable oils.

Agricultural exports in 1963-64 were \$2 billion larger than agricultural imports. This is the largest agricultural export balance on record in the past half century. The balance of trade for the past several years has been highly favorable, reflecting the pronounced upward trend in agricultural exports (fig. 1).

Dollar exports rose to an estimated record high of almost \$4,600 million in 1963-64 and accounted for three-fourths of the \$6,115 million total. Dollar sales are expected to exceed the previous record of \$3,600 million set in fiscal year 1962-63 by \$1 billion and account for practically all of the gain in total U.S. agricultural exports in fiscal year 1963-64. Most gains in dollar sales in fiscal year 1963-64 were brought about by larger exports of wheat and flour, feed grains, soybeans, animal products, rye, tobacco, and cotton.

Exports under the Food-for-Peace program are estimated at around \$1,550 million in 1963-64, the same as in the previous year. Substantial quantities of wheat and flour, rice, vegetable oils, and dairy products continued to move to the developing countries under the Food-for-Peace program. Food-for-Peace exports accounted for 25 percent of total U.S. agricultural exports compared with 30 percent in the previous year.

Of the \$6,115 million of U.S. agricultural exports in 1963-64, an estimated \$2,300 million benefited from export payment assistance: \$1,400 million as

U. S. AGRICULTURAL EXPORTS AND IMPORTS

1963-64 PARTLY ESTIMATED.

sales for dollars and \$900 million moving under Government-financed programs. This export assistance, in the form of export payments, and sales below domestic market prices, is estimated at about \$800 million. The latter amount is not included in the value of agricultural exports. Last year's payments of \$800 million were about one-third above those of other recent years due mainly to larger sales of wheat and flour and cotton.

A number of factors contributed to the \$1 billion gain in U.S. agricultural exports in 1963-64, including U.S. market development efforts abroad, the economic advancement of Western Europe and Japan, expanding population, improving diets, competitive pricing, better quality of U.S. exports, and improved service to exporters. Inflationary trends in Western Europe also encouraged countries there to increase imports as a way to combat inflation.

The unfavorable wheat harvest in the Soviet Union and Western Europe contributed most to the substantial gain in exports of wheat and flour. In addition, exports of feed grains continued to be encouraged by the rapidly developing livestock industries in the more industrialized countries of Western Europe and Japan. Cotton exports were stimulated by a change in the Commodity Credit Corporation (CCC) cotton program permitting sales at competitive prices from CCC stocks, a slight decline in foreign free world production in the 1963 season, and relatively small stocks in most exporting and importing countries. In the previous year, relatively more cotton exports moved under the payment-in-kind program.

The rapid growth in disposable incomes in the industrialized countries of Western Europe and Japan encouraged consumers in these countries to upgrade their diets with a greater variety of foods, especially livestock products. U.S. exports included not only substantially larger amounts of feed grains and protein meal for livestock production but also somewhat increased shipments of meat and other livestock consumer products. Most industrialized countries encouraged indigenous production of meat, poultry, and dairy products and also imported raw materials such as feed grains, soybeans, and protein meal to produce **livestock** consumer products.

It is estimated that 75 million U.S. acres were required to produce the various quantities of agricultural commodities exported in fiscal year 1963-64. This is equivalent to 1 out of every 4 harvested acres in the United States. On a value basis, agricultural exports were equivalent to 17 percent of total cash receipts from U.S. farm marketings.

Although the export market is of significance to all U.S. agricultural producers, it is of particular significance as an outlet for certain U.S. commodities. In fiscal year 1963-64 the export market provided an outlet for three-fourths of the wheat production; two-thirds of the rice and nonfat dry milk; half of the dry edible peas; over two-fifths of the tallow, soybeans and hops; about a third of the cotton, rye, prunes, and dried whole milk; around a fourth of the lard and tobacco; and one-fifth of the raisins, dry edible beans, cottonseed, grain sorghums, and barley.

Animals and animal products. Exports of animals and animal products in 1963-64, estimated at \$783 million, were 29 percent above the \$605 million a year earlier.

The substantial increase resulted from notably larger exports of dairy products, animal fats, and red meats, with a moderate gain in poultry meat. Exports of meat and meat products rose to 425 million pounds (product weight) in 1963-64 from 302 million a year earlier, reflecting mainly larger exports of fresh pork to Japan, Western Europe, and Canada. Pork exports advanced to an estimated 160 million pounds in 1963-64 from 102 million a year earlier. In addition, exports of variety meats increased substantially in this period, going mostly to Western Europe to supplement the relatively limited meat production there. U.S. prices, especially for variety meats, continued relatively low and encouraged European importers to purchase more U.S. meat. The rapid growth in disposable incomes in the industrialized countries has resulted in a heavy demand for meat products. Production in these countries in 1963-64 could not keep pace with the substantial increase in demand for meat products.

Exports of dairy products rose to \$209 million in 1963-64, up 36 percent from \$154 million a year earlier. Much of the increase resulted from dollar exports of butter from CCC stocks to Western Europe. In addition, large quantities of dairy products -- especially nonfat dry milk, butter, and butteroil -- were exported under the Food-for-Peace program.

The improvement in exports of animal fats resulted from large gains in shipments of both inedible tallow and greases and lard. Lard exports increased to \$62 million in 1963-64 from \$41 million a year earlier, reflecting stepped-up shipments to the United Kingdom, which took about 80 percent of U.S. lard exports during the past year. The gain in tallow exports principally reflected larger sales for dollars. Principal outlets for U.S. tallow last year were Japan, Italy, Netherlands, UAR (Egypt), Poland, and Spain.

U.S. exports of poultry meat increased over 1962-63 despite the effects of the European Economic Community (EEC) system of variable levies. Overall exports of poultry meat increased to an estimated 230 million pounds in 1963-64 from 196 million a year earlier. Demand was stronger for turkey meat in West Germany and broilers in Japan. Increases occurred in sales to other outlets due in large measure to an expanded market development program that offset much of the sales loss in the EEC market.

The volume of hides and skins exported rose one-third to 15.7 million pieces in 1963-64 from 11.6 million a year earlier. However, value advanced 4 percent over the previous year. Export prices were lower in 1963-64 as a result of substantially increased production in the United States and some other major producing countries.

Cotton. U.S. cotton exports, excluding linters, totaled an estimated 5.2 million running bales in 1963-64 compared with 3.6 million a year earlier. Exports were encouraged by (1) a change in the U.S. cotton export program that permitted exports from CCC cotton stocks at competitive prices, (2) some gain in cotton consumption in Western Europe and Japan, (3) smaller foreign free world production of cotton, and (4) relatively low stocks in major importing and exporting countries. Principal outlets were the European Economic Community, Japan, Canada, United Kingdom, India, and South Korea. In the 1963-64 marketing year (August 1963-July 1964), the United States is expected to account for about 30 percent of world cotton exports, up from 21 percent in 1962-63.

Grains and preparations. U.S. exports of wheat and flour totaled an estimated 850 million bushels in 1963-64 compared with the previous year's 637 million bushels. The gain resulted from larger shipments to Western Europe and the Soviet Union because of adverse weather that substantially reduced crops there. Production in the Soviet Union was down by an estimated 25 percent and in Western Europe by 17 percent. In addition, Japan continued to buy considerable quantities of wheat and became the top dollar market for U.S. wheat. Main outlets in order of importance last year were India, Japan, Pakistan, UAR-Egypt, the Soviet Union, Brazil, and Poland. During the first 11 months of 1963-64, exports to the Soviet Union totaled 62 million bushels and to other Bloc countries, 48 million bushels. The United States exported over half of its wheat under the Food-for-Peace program in 1963-64 compared with three-fourths in the year before. U.S. wheat exports represented two-fifths of world exports in 1963-64.

In 1963-64 hard red winter wheat accounted for 61 percent of U.S. exports; hard red spring wheat, 6 percent; soft red winter wheat, 11 percent; white wheat, 19 percent; and durum, 3 percent.

U.S. exports of rice (milled basis) totaled an estimated 32.6 million bags in 1963-64, an alltime high compared with the previous year's 24.2 million bags. The increase resulted primarily from gains in commercial sales for dollars. Commercial sales for dollars are estimated at half of the total exports, up from 38 percent in the previous year. Leading outlets were India, the Soviet Union, Nansei and Nanpo Islands, Indonesia, Canada, South Africa, and Saudi Arabia.

Exports of feed grains totaled an estimated 15.9 million metric tons (excluding products) in 1963-64 compared with 14.8 million in the previous year. Exports of corn totaled 460 million bushels in 1963-64 compared with 397 million a year earlier. Exports of other feed grains -- oats, barley, and grain sorghums -- were somewhat below the levels of a year earlier. Exports to the European Economic Community accounted for about 35 percent of total feed grain shipments. Japan took an estimated 2.7 million tons of feed grains. The rapid growth in livestock industries in both Western Europe and Japan has resulted in a rising demand for feed grains. The United States had abundant supplies available at competitive prices to meet this demand, while most other major producers had relatively little to export in the past year. The United States accounted for slightly over half of world feed grain exports last year.

Fruits and preparations. Exports of fruits and preparations were slightly below the level of the previous year. An estimated \$273 million moved out compared with 1962-63's \$280 million. Gains in fresh apples, lemons, oranges, and raisins were more than offset by declines in canned peaches, dried prunes, fresh pears, fruit juices, and canned pineapples. Somewhat smaller supplies of some commodities, especially canned peaches and oranges, and higher prices were the main factors in the overall decline for fruits and preparations.

Oilseeds and products. U.S. exports of oilseeds and products set a record in 1963-64. Exports are estimated at \$858 million compared with \$777 million a year earlier. The increase was brought about by larger exports of soybeans at

higher prices. Exports of vegetable oils, protein meal, and flaxseed were somewhat below the levels of a year earlier. Soybean exports increased to an estimated 190 million bushels in 1963-64 from 171 million in the previous year. The value increase of \$84 million resulted in part from higher prices. Exports of protein meal totaled 1.4 million short tons in 1963-64, slightly below a year earlier. Combined exports of cottonseed and soybean oils totaled 1,464 million pounds in 1963-64 against 1,601 million in the previous year. The continuing rise in exports of oilseeds and products in the past 6 years -- averaging 15 percent annually -- has been associated with the continued growth of the livestock industries in the industrialized countries of Western Europe and Japan where demand for protein meal for mixed feeds has been strong. In addition, foreign production of oilseeds and products during this period has not kept pace with the demand for oils either in the developing or the more industrialized countries.

The United States accounted for about one-third of world trade in oilseeds and products in 1963-64. Soybean production in Communist China, once the leading producer, continued at relatively low levels with only small amounts available for export.

Tobacco. U.S. exports of unmanufactured tobacco totaled an estimated 515 million pounds in 1963-64 compared with the previous year's 473 million. The gain resulted primarily from larger takings by the United Kingdom, West Germany, and the Netherlands. Exports also benefited from the relatively high quality of the 1963 crop, small production in some foreign producing countries, and the low stock position of U.S. leaf in many important world markets. Moreover, the quality of tobacco produced in some of the other producing countries was below that of recent years. U.S. exports accounted for 31 percent of calendar year 1963 world tobacco exports.

Flue-cured leaf accounted for 81 percent of 1963-64 U.S. exports; burley, 7 percent; dark-fired, 3 percent; Maryland, 2 percent; and cigar wrapper, 1 percent.

Export Highlights

EXPORTS TO THE EUROPEAN ECONOMIC COMMUNITY JULY 1963-APRIL 1964

U.S. agricultural exports to the European Economic Community (EEC) advanced to \$1,173 million in the July-April period of 1963-64 from \$904 million a year earlier (table 2). The gain resulted from larger shipments both of commodities subject to EEC variable levies and those not subject to the levy system. Exports of commodities subject to the levies rose to \$367 million from \$306 million. The gain reflected a sharp rise in exports of wheat, with smaller gains for feed grains, pork, and turkey meat. The sharp gain in exports of wheat to EEC reflected the poor EEC wheat harvest, which was 205 million bushels below the previous year's total. Moreover, the unusually wet season produced a substantially lower quality of wheat in 1963, necessitating larger EEC imports of foreign wheat for blending with local wheat.

The gain in pork exports resulted from the relatively short supply of meat in the EEC area and increased demand from consumers with larger incomes.

The system of variable levies continued to reduce U.S. shipments of wheat flour, broilers, and fryers.

Agricultural commodities exported to EEC have been classified into variable levy and non-variable levy commodities for identification purposes. This classification is designed to show the overall change in exports of the commodities rather than to measure the impact of the variable levies on U.S. exports.

Commodities not subject to the variable levies totaled \$806 million in July-April of 1963-64 compared with \$598 million for the same months a year earlier. Cotton alone accounted for nearly half of the total increase for this group, reflecting a gain in EEC consumption, lower free world production, and a change in the U.S. export program permitting the selling of CCC stocks for export at competitive prices. Exports of soybeans, tallow, tobacco, variety meats, and vegetable oils also were larger. Declines were noted only in shipments of fruits and vegetables, associated with relatively limited supplies of some commodities in the United States along with higher U.S. prices.

^{1/} Compiled from U.S. Bureau of the Census data.

^{2/} Classified for identification of commodities subject to the variable levies which were put into effect on July 30, 1962. The classification is designed to show the overall change in exports of these commodities rather than to measure the impact of the variable levies on exports of these commodities.

^{3/} Exports of wheat flour to Italy include donations under Titles II and III of P.L. 480.

^{4/} Partly estimated.

Government Program Export Highlights

GOVERNMENT PROGRAM EXPORTS AND DOLLAR EXPORTS BY COUNTRY OF DESTINATION, CALENDAR YEAR 1963

P.L. 480 and AID program shipments reached a calendar year record of \$1,621 million in 1963, 29 percent of total U.S. agricultural exports which amounted to an alltime high of \$5,585 million (table 3). Exports for foreign currencies under Title I of P.L. 480 totaled \$1,151 million, over 70 percent of all program exports, with the remaining 30 percent consisting of donations, barter, and long-term supply and dollar credit sales under P.L. 480 and exports under AID programs authorized by P.L. 87-195, the Act for International Development.

Government Program Exports

Over half of the shipments under programs, \$850 million, went to Asia, where principal countries of destination were India, followed by Pakistan, Republic of Korea, Taiwan, South Viet-Nam, Indonesia, Israel, and other countries. Asia has been the principal recipient of program exports from the United States since 1959, receiving from 43 to 53 percent of U.S. exports under programs during this 5-year period (table 4).

Program exports to Europe, totaling \$285 million in 1963, were 18 percent of Government-financed exports. For the first 4 calendar years after the inception of P.L. 480, Europe was the principal area of destination of shipments under programs, accounting for 63 percent of all program shipments in 1955 and falling to 47 percent in 1958. Since that time the proportion of program exports to this area decreased more rapidly. Yugoslavia, Turkey, and Poland received 80 percent of all Government-financed exports to Europe in 1963.

Exports under Government-financed programs to Africa amounted to \$292 million in 1963, only slightly above those to Europe. Program shipments to the area increased from 1 and 2 percent of the total during the first 4 years of the operation of P.L. 480 to 21 percent in 1962, and fell to 18 percent in 1963. Principal African countries of destination in 1963 were United Arab Republic (Egypt), Algeria, Morocco, Republic of the Congo, and Tunisia. Although sales for foreign currency under Title I comprised the largest proportion of program exports to Africa, donations under Title II for the relief of emergency conditions were higher in 1963 for Africa than for any other geographic area except Asia.

Shipments under programs to Latin America totaled \$178 million. Government-financed exports to this area were 5 percent of the total in 1955, 12 percent in 1961, 10 percent in 1962, and 11 percent in 1963. Program shipments to

1/ Foreign donations are authorized under Sec. 416 of the Agricultural Act of 1949 and Sec. 302, Title III, P.L. 480.

2/ The barter program is authorized under the Charter Act of the Commodity Credit Corporation; Sec. 303, Title III, P.L. 480; and other legislation.

3/ AID programs.

4/ "Total agricultural exports outside specified Government-financed programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) extension of credit and credit guarantees for relatively short periods, (2) sales of Government-owned commodities at less than domestic market prices, and (3) export payments in cash or in kind.

5/ Less than \$500.

6/ Net adjustment from a previous period.

7/ The non-comparability of the data available for the reporting of Government-financed programs may affect the reliability of the totals for any country, but the discrepancies are most apparent when exports under Government programs exceed total exports. These excesses may be attributed to lags in reporting or to differences in valuation procedures. Exports under Title II are shown in this report at cost to C.C.C., whereas these shipments are at times reported to the Bureau of the Census at market value.

Table 3 .--U.S. agricultural exports under specified Government-financed programs, exports outside specified Government-financed programs, and total agricultural exports: Value by country of destination, calendar year 1963 - Continued

b/ Under agreements with Burma and Indonesia, raw cotton was exported to third countries for processing. In exchange, processed goods are exported to the agreement country. The Title I values shown for the above-mentioned countries do not include the value of the raw cotton exported to third countries as follows:

<u>Agreement Country</u>	<u>Value (Thousand dollars)</u>
Burma	4,862
Indonesia	9,637
Total	<u>14,499</u>

The cotton not included in the values for the agreement countries is included in the Title I value for the processing countries as follows:

<u>Processing Country</u>	<u>Agreement Country</u>	<u>Value (Thousand dollars)</u>
Hong Kong	Burma	281
India	Burma	441
Japan	Burma	4,140
Hong Kong	Indonesia	1,544
Japan	Indonesia	8,057
Yugoslavia	Indonesia	36
Total cotton processed in third countries		<u>14,499</u>

2/ The Title II value shown for India includes commodities exported to India to replace stocks advanced for emergency relief for the people of Nepal and Tibetan refugees.

10/ Donations through the United Nations Relief and Works Agency (UNRWA) for the relief of Palestine refugees.

11/ Since shipments to U.S. territories are not included in U.S. exports, shipments to Guam in the amount of \$3,000 are excluded from the total of exports under the barter program.

1/ Less than \$500,000.

2/ Less than .5 percent.

3/ Country of destination is not available for certain relief shipments.

Brazil in 1963 totaled \$86 million, principally sales for foreign currency under Title I. Donations through voluntary relief agencies under Title III, which made up nearly a third of program shipments to Latin America, were widely distributed throughout the area.

Government-financed exports to Oceania totaled \$0.2 million in 1963. Program exports to this area have varied from zero to a high of \$1 million in 1962 and have been less than 1 percent of total shipments under programs during the 9-year period since inception of P.L. 480 in 1955.

Exports for Dollars

U.S. commercial sales of agricultural commodities for dollars reached a record high of \$3,964 million in calendar year 1963, \$445 million above a year earlier and nearly \$2 billion above the \$2,010 million in 1955.

Credit sales of U.S. agricultural commodities during 1963 reached a record level of \$194 million, up \$47 million from 1962. All of the increase was in purchases under the CCC export sales program, which totaled \$117 million. From the inception of the program in 1956 through December 1963, credit purchases totaled \$270 million.

Purchases under the CCC credit sales program were principally for exports to Asia, followed by Europe, Latin America, and Oceania.

Medium-term guarantees extended by the Export-Import Bank during the year were for exports of cotton to Japan and Austria and corn to Hungary.

Credit sales are included in exports outside specified Government programs in table 3 and are shown separately in table 5.

Dollar sales to Europe in 1963 reached a high of over \$2 billion. This highly industrialized area has taken from 44 percent of total dollar sales in 1955 to 55 percent in 1962 and 52 percent in 1963. Europe included all but 2 of the 10 largest dollar markets in 1963. The United Kingdom purchased for dollars \$401 million of U.S. farm products during the year; West Germany, \$361 million; Netherlands, \$357 million; Italy, \$200 million; Belgium-Luxembourg, \$132 million; France, \$114 million; Spain, \$107 million; and Denmark, \$77 million. Dollar exports to these 8 countries were surpassed only by dollar sales to Japan and Canada.

Of the countries mentioned above, Italy and Spain may be cited as countries which during part of the P.L. 480 period received most of their agricultural imports from the United States under Government-financed programs; but, with increasing economic activity and larger gold and dollar assets, they have become major cash markets for U.S. farm products. Dollar exports to Italy increased from \$25 million in 1955 to \$200 million in 1963, and it has ranked among the 10 leading U.S. dollar markets since 1957. Dollar sales to Spain were in the neighborhood of \$10 million or less during the first 5 years of the P.L. 480 period. Although Government-financed program exports were still the larger proportion of U.S. agricultural exports to Spain in 1961, dollar sales reached \$62 million, climbed to \$87 million in 1962 -- exceeding program exports -- and then rose to \$107 million in 1963, placing Spain among the 10 leading U.S. dollar markets for the second consecutive year.

1/ Credits for relatively short periods repayable in dollars plus interest (covering the financing costs of the lending agency).

2/ Includes disbursements by U.S. commercial banks under Export-Import Bank medium-term guarantees against political and/or financial risk.

3/ Purchases during the period.

Asia was the second largest dollar market for U.S. farm products in 1963. Dollar exports to this area increased from \$391 million in 1955 to \$900 million in 1963 and comprised from 16 to 23 percent of all sales for dollars during the 9-year period. Japan, the leading commercial market in 1963, purchased for dollars a record \$634 million of U.S. agricultural products. Although Japan received a large volume of Government-financed exports in 1956 and 1957, it has been among the first 3 dollar markets during the entire 9-year period. Commercial exports to Hong Kong, Israel, India, and the Philippines each totaled between \$20 million and \$40 million during 1963.

Shipments to Canada, nearly all dollar sales, totaled \$596 million in 1963, 15 percent of all dollar exports. Dollar sales to Canada were second only to those to Japan. Canada and other countries of North America have accounted for 12 to 15 percent of all U.S. dollar exports since 1955.

Exports for dollars to Latin America totaled \$322 million in 1963 compared with \$289 million a year earlier. Sales for dollars to this area were 15 to 18 percent of total dollar sales during the earlier years of the 9-year period, but dropped to 8 to 9 percent since the substantial drop in exports to Cuba. Shipments for dollars to Mexico in 1963 totaled \$74 million and to Venezuela, \$64 million.

Sales for dollars to Africa amounted to \$59 million, 1 percent of the total. This area accounts for 1 to 3 percent of all U.S. dollar exports. Largest dollar markets during 1963 were the Republic of South Africa, United Arab Republic (Egypt), Federation of Nigeria, Liberia, and Ghana.

Dollar shipments to Oceania totaled \$44 million in 1963, with Australia and New Zealand accounting for over 90 percent of the total. Such shipments were 1 to 2 percent of total dollar sales during the 1955-63 period.

Import Highlights

JULY 1963-APRIL 1964

U.S. agricultural imports for consumption rose to \$3,452 million in the July 1963-April 1964 period from \$3,289 million in the comparable 10 months of the previous year. Over three-fourths of the 5-percent increase resulted from larger imports of complementary (noncompetitive) items, reflecting mainly higher prices for a number of commodities such as coffee, carpet wool, and cocoa beans. Complementary items advanced to \$1,584 million this July-April from \$1,457 million for the same months a year earlier. Imports of supplementary (partially competitive) commodities advanced slightly to \$1,868 million from \$1,832 million (table 6).

Supplementary Imports

July-April imports of supplementary commodities were 2 percent higher in 1963-64 than in the previous fiscal year. Increases in fruits and preparations, barley, hides and skins, vegetables, cane sugar, and meat and meat products were about offset by declines in dutiable cattle, apparel wool, and oilseeds and products.

Imports of animals and animal products declined by 7 percent in the July-April period, reflecting mainly smaller imports of dutiable cattle and apparel wool. Moreover, imports of meats and meat products have been below the levels of a year earlier since January 1964. Mexico and Canada have been shipping fewer cattle to the United States because of relatively unfavorable prices for live cattle in the United States. Cattle imports were unusually heavy in 1962-63 because of unfavorable grazing conditions in both Mexico and Canada.

Less apparel wool was also imported in 1962-63 than in 1961-62 because of reduced mill use and a slight decline in the share of wool used in making textile products. The increase in imports of hides and skins resulted mainly from larger imports of goat, kid, sheep, and lamb skins.

The value of sugar imports rose by 7 percent, whereas the quantity declined by 27 percent. Increases in grains and preparations were due to gains in shipments of barley for malting. The increase in fruits and vegetables resulted mainly from larger imports of citrus juice in response to relatively low production in the United States following the severe Florida freeze in 1962. The gain in vegetables and preparations represented larger imports of fresh cucumbers, white potatoes, and tomatoes during the U.S. off-season.

Total imports.....	3,289	3,452	+5

Complementary Imports

A 9-percent rise in imports of complementary products stemmed from larger imports of coffee, bananas, and carpet wool. In addition, higher prices for coffee, cocoa beans, and carpet wool also added to the value gain. Coffee imports increased to 2,876 million pounds in July 1963-April 1964 from 2,721 million a year earlier. Coffee prices have increased since January 1964 as a result of a relatively poor crop in Brazil. Crude natural rubber imports continued their downward trend of the past several years, reflecting lower prices and greater reliance on synthetic rubber.

Imports of carpet wool rose to \$95 million in July 1963-April 1964 from \$82 million a year earlier; but quantity fell to 159 million from 170 million pounds.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 87-195 (Act for International Development), principally sales for foreign currency; under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$100-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$100-\$1,999 are sampled.

IMPORTS Imports for consumption consist of commodities released from U.S. Customs custody upon arrival, or entered into bonded manufacturing warehouse, or withdrawn from bonded storage warehouse for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
